

Caregiver: Elderly Parent Help

One calm place to coordinate care for Mom, Dad, or other loved ones, so nothing falls through the cracks and your whole family stays in sync.

Why we built this

Caring for an aging parent is a lot, especially when you're juggling work, kids, and distance. **Caregiver** is for adult children who need a simple, reliable way to share the mental load: appointments, medications, tasks, and important documents, with the people who actually help.

We focus on **relief and clarity**, not clinical dashboards. The app is warm, readable, and built for real life when plans change, doses get skipped, and someone still needs to know what happened.

What you get at a glance

One shared hub

Calendar, tasks, meds, documents, and family

Stays in sync

Updates flow to your care circle so you're not re-explaining the same detail

Built for real life

Flexible medications and tasks. Log taken, skipped,

Your circle, invited

Invite family or trusted helpers (within your plan limits) so

context in a
single care hub,
not scattered
across texts
and
spreadsheets.

to every sibling
or helper.

or missed;
adjust without
punishment or
rigid workflows.

care is
genuinely
shared, not
siloed on one
phone.

Core benefits

Less mental load

See what's next for Mom or Dad in one place. Personalized prompts after onboarding reflect what's hardest for you right now, from updates and meds to appointments or feeling overwhelmed.

Everyone stays in the loop

Shared tasks, calendar, medication logs, and a recent activity feed help the whole care circle see what happened, without extra coordination effort from you.

Care that fits real schedules

Track medications in a flexible way: log doses as taken, skipped, or missed; optional on-device reminders; history visible to those in the circle, with no “perfect patient” requirement.

Important info, safely shared

Keep insurance cards, IDs, and visit summaries in a document vault your care circle can reach when it matters, alongside appointments on a shared calendar.

Key features

Care hub & onboarding

- ✓ **Guided start** that aims for relief in the first minute, not a wall of forms.
- ✓ **Pain Mirror** choice (updates, medications, appointments, overwhelm, organization) shapes encouragement and next steps.
- ✓ **Quick win:** add Mom, Dad, or your loved one with a first name. Skip if you need to breathe first.
- ✓ **Gentle family nudge** after you've started tracking care. Invite when you're ready.
- ✓ **Care hub** language throughout: human, not corporate.

Tasks & care plans

- ✓ **Shared task list** for the active loved one, so everyone in the circle sees the same picture.
- ✓ **Optional due dates and notes.** Add detail when it helps, not because you have to.
- ✓ **Assign to me** when you're owning a task; filter by All, Upcoming, or Done.
- ✓ **Complete or archive** without rigid workflows; edit later if reality changes.

- ✓ **Plan-style labels** to group what matters (home, medical, family, and more).

Shared calendar & appointments

- ✓ **Appointments** with title and time, so your circle sees what's coming.
- ✓ **List, week, and month views** to match how you think about the week.
- ✓ **Mark complete or archive** when visits are done; move items back if plans shift.
- ✓ **Related tasks** where it makes sense, so a visit and its to-dos stay connected.

Medications

- ✓ **Name, dosage, frequency, notes** (as much or as little as you use in real life).
- ✓ **Log taken, skipped, or missed**; history stays visible to the care circle.
- ✓ **Optional daily reminders** on this device. Permission-based, not a lecture.
- ✓ **Nothing locked in stone.** Adjust and correct like you would on paper, but shared.

Document vault

- ✓ **Upload documents** tied to the loved one's hub (think insurance cards, IDs, visit summaries).
- ✓ **Search by file name** when the list grows.
- ✓ **View on device** via secure access your circle shares. No emailing photos of cards at midnight.

Family & updates

- ✓ **Invite caregivers** by email into a care circle for each loved one (limits depend on your plan).
- ✓ **Hub admin** owns billing for Premium/Pro; invited members benefit from unlocked limits on hubs they're in.
- ✓ **Recent updates** surface meaningful activity: tasks, appointments, medication logs, and documents. So the story of the week is visible.
- ✓ **Push notifications** where configured, to reduce "did anyone...?" messages.

Privacy & trust

- ✓ **Your data lives in a secure backend** with access rules so only the right people see a loved one's hub.
- ✓ **Sessions and sign-in** handled through standard mobile auth flows (email/password; Apple/Google as available).
- ✓ **No selling your story** as a product pitch. This is a tool for families, not a data broker.

Free vs Premium — in plain language

Essential caregiving features are **free** so you can coordinate care without a paywall on the basics. Optional subscriptions add room for larger families, deeper log history, simple health charts, and heavier document use. The **hub admin** (the person who set up the care hub) is the one who pays; invited family usually **inherit that hub's benefits** on that loved one's circle.

What's included by plan

Free	Premium	Pro

	Free	Premium	Pro
Loved one profiles (your account)	1	Up to 4	Up to 8
Members per care circle	Up to 4	Unlimited	Unlimited
Document vault (hubs you own)	About 50 MB per loved one	No vault size cap	No vault size cap
Care log — notes & readings	Logging is free for everyone in the circle.		
Care log — list history filters	Last 3 or 7 days (when the hub owner is on Free)	Through about three months of presets in the app	Even longer, including an all-time view with paging when the list grows
Care log — health trend charts	Not included Charts unlock when the hub owner upgrades.	Short ranges through about one month , plus PDF export	Up to about six months in one view, same PDF export
Calendar, tasks, meds, updates	Core coordination features are in the free plan.		
Family activity feed	Same experience on Free and paid today — not a separate paywall.		
Who pays for Premium / Pro	—	The hub admin (care hub owner) on their account; invited members benefit on that hub.	

Charts and care-log time ranges follow the **hub owner's** plan for that loved one's hub — not each invited member's personal subscription. Pricing may vary by region; see the in-app or store listing for current prices.

In plain words

“Built for families who share care, without living in endless group chats.”

Caregiver: Elderly Parent Help

Perfect for

- ✓ **Adult children** coordinating a parent's care from another city or state.
- ✓ **Siblings sharing responsibility** who need one source of truth.
- ✓ **Anyone feeling overwhelmed** who wants a calmer first screen and a clear next step.
- ✓ **Families juggling meds and appointments** who need flexibility, not rigidity.
- ✓ **Care circles** that include a partner, relative, or trusted friend, not only “immediate” family.

Getting started

- 1 **Download Caregiver: Elderly Parent Help** from the **App Store** or **Google Play** (or start from calmingaura.net).
- 2 **Create your care hub account** (email, or Apple/Google where supported).
- 3 **Add Mom, Dad, or your loved one** (name first). You can add tasks, appointments, meds, and invites whenever you're ready.

- 4 **Add a task, appointment, or medication** so the hub reflects real life.
- 5 **Invite family** when you're ready. Shared care works best when others can see the same plan.
- 6 **Check Recent updates** on the Family tab to see what the circle has done lately.

Bring your care circle into one calm hub

Same app for iPhone and Android.

App Store

Google Play

If a store link moves, search for **Caregiver: Elderly Parent Help** or use calmingaura.net.

Caregiver: Elderly Parent Help

Official app name: **Caregiver: Elderly Parent Help** (same in the app, on the stores, and in our policies).

Simple, reliable, and emotionally supportive care coordination, without corporate coldness.
